[25]:
```python
#number is prime or not
num = int(input("Enter  a number "))
for i in range(2,num,1):
    if(num%i==0):
        print("its not a prime number")
        break
else:
    print("prime number")
```

```
Enter  a number  15
its not a prime number
```

[30]:
```python
#print a table
num = int(input("Enter a number"))
for i in range(1, 11,1):
    print(num,"x" ,i ,"=",num*i)
```

```
Enter a number 8
8 x 1 = 8
8 x 2 = 16
8 x 3 = 24
8 x 4 = 32
8 x 5 = 40
8 x 6 = 48
8 x 7 = 56
8 x 8 = 64
8 x 9 = 72
8 x 10 = 80
```

Loops : a loop is a programming concept used to excute a block of code repeatedly until
        certain condition is met or sequence is completed
types of loops
.for loop
   1.for loop with sequence
   2.for loop with range
.while loop
.nested loop
   1.for loop inside for loop
   2.for loop inside while loop
   3.while loop inside while loop
   4.while loop inside for loop
```

[3]:
```
#for loop
name = "jungkook jeonghan"
for char in name:
    print(char,end=" ")
```

```
j u n g k o o k   j e o n g h a n
```

[4]:
```
#position of each character
name="jeonghan"
pos=0
for char in name:
    print(f"position : {pos},character : {char}")
    pos =pos+1
```

```
position : 0,character : j
position : 1,character : e
position : 2,character : o
position : 3,character : n
position : 4,character : g
position : 5,character : h
position : 6,character : a
position : 7,character : n
```

[ ]:
```
for loop with range
intialization/start value
condition/stop value
increment/decrement/step size

range(start value,stop value,step size)
default start value= 0
stop value = upto given condition
step size =1

for iterative in rane(stv,spv,ss):
    statements
```

[6]:
```
for i in range(1,11,1):
    print(f"good morning : {i}")
```

```
good morning : 1
good morning : 2
good morning : 3
good morning : 4
good morning : 5
good morning : 6
good morning : 7
good morning : 8
good morning : 9
good morning : 10
```
