Python

Programming

* It is a process of writing instructions for a computer to perform a specific task.
* These instructions are written using a programming language such as python, java, C & C++ etc.

Program

* It is a set of instructions given to a computer to perform a particular task.

Programming language

* It is a language used to communicate instructions to a computer.

Introduction to python

* It is a high level, intrepreted, object oriented programming language.

Features

* easy to learn (syntax is simple & readable)
* free and open source
* platform independent
* vast collection of libraries
* it support all kind of programming languages

History of python

* Python was developed by Guido van Rossum, a Dutch programmer.
* The development of python started in December 1989.
* It was first released in 1991.

Versions

- python 1.0 was released in 1994
- python 2.0 was released in 2000
- python 3.0 was released in 2008

⇒ Current version of python : python 3.15.0

Different methods of print

* print() function is used to display information on the screen.

1. printing strings, numbers, variables

```
print ("Hello")
print (name)
```

2. Using f-strings

An f-string allows us to insert variables directly inside a string using curly braces {}

name = "jungkook"

age = 29

print (f" His name is {name} and His age is {age}")

3. Using format()

print (" His name is {} and his age is {}".

format (name, age))
